PROFILE

Product designer and design engineer with **15+ years in tech**, a decade building startup products and **25+ years making electronic music**. I work from product framing and customer conversations through interaction design and implementation. My experience combines AI products at scale, analytics integrations, component systems and music software built from first-hand studio practice.

15+ YEARS IN TECH

10+ YEARS IN STARTUPS

25+ YEARS MAKING MUSIC

SELECTED WORK

01 / AI PRODUCT

Mixo

Co-founder
Product, design
& engineering

Product direction and implementation. I co-founded Mixo and worked across UX, the Vue 3 / XState application, backend services, growth and support. The platform has created **3M+ websites**; this is a platform outcome, not an individual feature result.

- Daily support conversations led to **custom forms**, helping customers collect enquiries and feedback from their own visitors.
- Analytics integrations and PostHog / Cloudflare monitoring inform product questions alongside customer feedback.

02 / CREATOR TOOL

Mixvisor

Solo design
& engineering
Tauri + Vue

Built to help me finish more music. I designed and engineered the desktop app from a problem in my own studio: returning to unfinished sessions with enough context to continue.

- Organises projects across major DAWs around sessions, workflow status and notes, rather than just folders.
- Carried the product model, interaction design and desktop implementation from the initial problem to working software.

THE EXPERIENCE BEHIND THE WORK.

SELECTED EXPERIENCE

2016 TO PRESENT

Fuzzy Logic Labs

Co-founder

Co-founded a digital agency and startup studio. Built products including Mixo, Mixvisor, Userfold and Room for Sound, working across product direction, design, engineering, growth and support.

2016 TO 2017

LawPath

Product Engineer & Product Manager

Led the company registration product across strategy, design, frontend engineering, third-party APIs and ASIC integration, with ownership of product direction.

2013

CommBank website rebuild

Lead Engineer

Led frontend development for a 20,000-page migration, owning frontend architecture, code review and coordination across design and backend teams.

HOW I WORK

- **Start with the question.** Use customer conversations and observed behaviour to decide what needs solving.
- **Make it testable.** Prototype interaction, state and edge cases in code; review AI-assisted output critically.

MUSIC & METHODS

Practice, not just an interest.

Producing and DJing since 12. Degree in Music Production. Label releases and recent independent releases.

Ableton since Live 4 and a former beta tester. Logic experience from the Emagic era. My own studio, with a focus on hardware and sampling.

CURRENT PRACTICE

Recording, MIDI, mixing, routing, signal flow, VST/AU workflows, hardware synths and samplers.

TOOLS & SYSTEMS

Figma, HTML/CSS, JavaScript/TypeScript, Vue, XState, Astro, Tauri, Storybook and component-driven architecture.

ANALYTICS EXPLORATION

The application includes an interactive creator-insights study. It uses fictional data to demonstrate metric definitions, comparisons and access to the underlying rows. It is not presented as shipped SoundCloud work.

A NOTE ON LOCATION

I understand that the advertised role is New York hybrid and not remote. I'm asking SoundCloud to consider a **UK-based exception**. I have worked remotely for over ten years and can maintain overlap with New York; any arrangement would need your agreement.
